Abstract	<p>*The dataset shows climatically optimum growth areas and yield estimates of <i>Pinus taeda</i>. *Yield estimates were derived from Schulze R.E. and Maharaj M., (2007).</p> <p>*The map shows the climatically optimum growth areas to be along the north coast of the Eastern Cape, significant tracts in the midlands of KwaZulu-Natal, and parts of Mpumalanga. Major climatic growth constraints are drought related. Highest Mean Annual Increments (MAIs), according to Smith's (1994) equations, are 20 - 22 t/ha/annum and these coincide with the climatically optimum growth areas.</p>
Keywords	agriculture, biomass, growth areas, pinus taeda, yield estimation
